Registration \$300 per person.
Includes computer rental pre-loaded with Revit MEP.

JUSTIFICATION TOOLS

This January ASPE and the Orange County Chapter are hosting a training workshop in your area on Revit MEP.

As a professional in this industry you probably need ways to approach your employer about justifying the expense and allowing you the time off to attend this workshop. Here's what you can share with your employer:

- » The training is very affordable compared to a private company's registration fee for the same training. At only \$300 our fee includes a computer rental with the software pre-loaded so you will be prepared to learn at no additional cost to your employer. A traditional training of this nature is typically around \$500 per day so ASPE's workshop is an incredible deal.
- » It's a hands-on workshop, and the instructors are providing insight on the future of the technology so you will be on the cutting-edge of the industry.
- » This workshop awards 0.75 CEUs at a very reasonable cost. The price per CEU is approximately \$43, and if you're a CPD this will directly apply towards your re-certification.
- » The training provided is very specific to your industry. This workshop covers plumbing design and HVAC as well as plumbing-related techniques that are specific to your job responsibilities.
- » By attending this workshop you can connect with the Society outside of the traditional monthly meetings.
- » This is an intimate networking opportunity but you'll also bring back real-world training to share with your coworkers.

Have you seen the registration page? At aspe.org/revitmepworkshop you'll see all the discussion topics and what you can expect to learn during your time with ASPE on January 30 in Santa Ana.
