EFFICIENTLY TRANSITION FROM PEX-A TO SCHEDULE 80 CPVC

ProPEX® LF Brass Schedule 80 Corzan® CPVC Adapters

A first in the industry, transitioning from Schedule 80 CPVC to ProPEX® has never been easier. These innovative adapters reduce the number of required components in hybrid domestic water systems to provide materials costs savings and labor efficiencies while improving system performance.

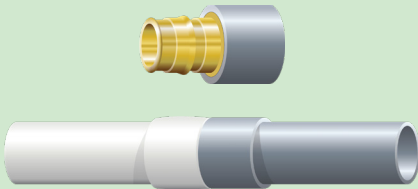

One-Step Transition Fitting

- Fewer connections
- Labor and materials savings
- Faster installs
- Improves system performance
- Spigot and socket available
- Sizes from ½" to 3"
- Maximizes designs to full pressure rating
(50% pressure reduction with threaded)

Frequently Asked Questions

Is there a recommended solvent cement for making the CPVC connection?

No, however, Uponor does recommend a two-step solvent welding process. Be sure to follow all solvent cement manufacturer instructions as well as Uponor guidelines for proper connections. Take precautions to prevent the solvent cement from contacting the PEX pipe or any ProPEX EP fittings in proximity.

What is the difference between spigot and socket adapters?

Spigot adapters transition from a CPVC fitting, so the adapter fits into the fitting. Socket adapters transition from CPVC pipe, so the adapter fits over the top of the pipe.

Can these fittings transition from copper tube size (CTS) CPVC pipe and fittings?

These adapters are designed for connection to iron pipe size (IPS) Schedule 80 CPVC pipe and fittings. For transitions from CTS pipe and fittings, use Uponor ProPEX LF Brass Spigot and Socket Adapters (part numbers CP4501313, CP4501515, CP4502020, CP4511313, CP4511515, and CP4512020).
